

Nicklaz Lentz

Full-stack Developer / Software Developer

Development since 2013 - from concept and design to secure operation.

PROFILE

I am a full-stack developer from Denmark, focused on turning complex ideas into simple, fast and stable digital products. My interest in development began in 2013, when I built my first solutions in Lua for FiveM and Roblox. In 2017, I moved into web development with HTML, CSS and JavaScript, followed by React, Next.js, Vue, backend systems and integrations. Today, I work across product, design and engineering - from the first concept to a production-ready solution.

EXPERIENCE

- oui oui** 2026 - PRESENT
Software Developer
Develop and maintain modern web and software solutions, internal tools, e-commerce integrations and AI-assisted workflows. Work across frontend, backend, APIs and product delivery with a focus on performance, security and usability.
- CodeStack** 2019 - 2026
Founder & Full-stack Developer
Founded a Danish development brand focused on websites, online stores, AI solutions and custom software. Responsible for product direction, architecture, UX, implementation and deployment.
- SuperAwesome.dk** 2023 - 2024
Web Developer
Redesigned and developed the complete website for a large Danish Minecraft community, focusing on clean structure, high performance and a more coherent user experience.
- Hjemezez.dk** 2022
Developer
Developed web and SourcePawn solutions for a Danish gaming community alongside my education.

EDUCATION

Videndjurs
